

Button Up Your Home

Winter is moving in!

Remember the winter of 2010-2011? Did ice dams ruin your weekends and perhaps your home interior? Take advantage of the warm weather and start preparing your home for winter mode and save energy at the same time:

- Be sure to schedule the annual cleaning of your heating system.
- Start the heating season right with a new air filter in your furnace.
- As the days get darker, you will rely more on lighting. Be sure you are using compact fluorescent bulbs.
- Check for obvious air leaks around the exterior walls and seal them up.
- Be safe...have your chimney checked and cleaned.
- Move furniture and curtains away from heat registers and return ducts.
- Consider heating a room instead of a house...explore room heaters and fireplace inserts from Wesson Energy.
- Add more insulation to your attic and be sure to increase your ventilation if needed.

If you want to some help accomplishing the above, read below and get a big jump on sealing up those annoying drafty leaks in your home.

Let the Professionals Seal Up Your Home!

Home Energy Solutions

In May 2009, Wesson Energy became an authorized contractor for the Home Energy Solutions program (sponsored by the [CT Energy Efficiency Fund](#)). Since then, over 5,000 very energy smart Wesson customers have participated in the program and have been saving energy use throughout their home every since! Each customer can receive up to 25 compact fluorescent lightbulbs at the time of the visit! Reducing their annual lighting usage by over 500 kWh! These customers are also enjoying less drafty homes because our technicians sealed up leaks that were causing drafts and allowing your heat to escape to the outside.

You can learn more about this program by [clicking here](#). Or calling us at 203-759-3800.

A great **do-it-yourself** task is to buy and install compact fluorescent bulbs. Caulk up big, obvious leaks in our exterior walls.

Start the heating season right. Schedule your annual **clean, tune and test** and benefit from Wesson Energy's expertise in ensuring your system is running as efficiently as possible.

This newsletter is published by Wesson Energy to provide energy saving ideas to their customers.
